

Accessibility of the content of the Classification of Occupations via API

The Classification of Occupations is available and downloadable (in JSON format) via machine-to-machine interface at <https://estat.stat.ee/codelists/codelist/AK2008ap>.

The classification is consistent and elements have a start and end date. This means that elements are not deleted or changed: if necessary, an end date, or in the case of a new element, a start date is fixed.

Always check the expired and started elements so as not to use an expired element as an employee's occupation. It is advisable that the user is notified of such changes in the classification by the software and that the respective notifications requiring action by the user are displayed on the screen.

Reporting 3.0. Wages and labour force taxonomy

Statistics Estonia has developed a set of classifications (taxonomy) in cooperation with Eesti Pank and the Tax and Customs Board. In case this taxonomy is used in the payroll software (module), data can be transmitted via machine-to-machine interface straight from the software and reporting in eSTAT is no longer necessary.

Further information on "Reporting 3.0" is available on the website www.stat.ee under the menu item "Submit data". By clicking on the link "[Halduskoormuse vähendamise projekt "Aruandlus 3.0"](#)" (only in Estonian), you will find an overview of the project "Reporting 3.0" created during the so-called zero-bureaucracy initiative.

Developers of financial software (currently only the wages and staffing modules, but later all financial accounting areas) might be interested in how to transmit data to Statistics Estonia via machine-to-machine interface and about the required data format. In this section, you will also find a document which includes full information about the dataset and used classifications.
