

## LIST OF ENVIRONMENTAL PROTECTION ACTIVITIES

1002, 1003

Code	Name	Explanation	Submit (common examples)	Exclude (common examples)
1	Protection of ambient air and climate	activities and measures aimed at the reduction of emissions of air pollutants, greenhouse gases and substances depleting the ozone layer and/or measuring their ambient concentrations (e.g. treatment of exhaust gases, introduction of less polluting technologies, etc.), and monitoring and laboratory activities. Measures taken to save costs are excluded.	filters, analyses for air emissions, environmental specialist in the area of air protection, road surfacing, ventilation and filter maintenance, dust control, watering roads, use of cleaner fuels	bicycle, solar panels, wind turbines, etc. related to renewable energy. Pollution charges for air emissions
2	Wastewater management	activities and measures aimed at reducing the release of wastewater into water bodies (e.g. wastewater treatment, sewerage networks, treatment of mining water, introduction of new technologies to reduce the amount of pollutants or waste water), and monitoring and laboratory activities	payments for sewerage, payments for wastewater treatment, analyses for wastewater treatment, environmental expert in the area of wastewater, septic tank, sewage treatment plant sludge pool, sewerage network installation, cooling water treatment	matters relating to the distribution of drinking water, payments for drinking water, protection of groundwater against pollutants. Pollution charges for water pollution
3	Waste management	activities and measures aimed at the reduction of the amount of waste generated and the adverse impact of waste on the environment (collection and transport of waste, waste management, incineration, composting and landfilling, introduction of technologies to reduce toxicity or waste from production, etc.), and monitoring and laboratory activities	payments for refuse collection, transport of waste to landfill, street sweeping. Analyses and monitoring related to waste. Waste container, waste bins, sorting of waste, sale of scrap metal, plastic waste and sawdust, treatment of hazardous waste, car recycling	snow removal, resource savings related activities. Pollution charges for waste
4	Protection and remediation of soil, groundwater and surface water	measures and activities aimed at the prevention of pollutant infiltration into soil, ground and surface water, cleaning up of soil and water bodies and the protection of soil from erosion and salinisation	monitoring of soil, groundwater or surface water quality, laboratory activities, etc. Oil bath, oil trap, silo, manure storage, absorbent purchase, protection of groundwater against pollutants	activities related to drinking water, drinking water treatment, clean water pipelines
5	Noise and vibration abatement	activities and measures aimed at the control and reduction of noise and vibration from industry and transport (e.g. measures to reduce noise and vibration from existing equipment and engines, the introduction of new low-noise equipment, anti-noise facilities and screens, buffer zones, etc.), and monitoring and laboratory activities	rubber mats for reducing vibration, ventilation silencers, noise measurements, noise studies, noise reducing surfaces (multi-layer surfaces, asphalt instead of concrete), noise walls, noise mounds	workplace protection measures aimed at improving the working conditions of employees

Code	Name	Explanation	Submit (common examples)	Exclude (common examples)
6	Protection of biodiversity and landscapes	activities and measures aimed at the protection of animal and plant species, habitats, ecosystems, natural and semi-natural landscapes (e.g. the rehabilitation of plant and animal species, conservation, restoration of endangered habitats including water bodies, organisation of enumerations and making of inventories, establishment of protected areas and databases, management of protected areas, regeneration of former quarries and mines, consolidation of river banks, etc.)	forest monitoring, maintenance of semi-natural communities, control of Sosnowsky's hogweed, purchase of land to protect biodiversity	protection of urban parks and historical monuments, measures to ensure forest fire safety, rodent control, weed control in agriculture
7	Protection against radiation	activities and measures aimed at the reduction or elimination of the negative consequences of radiation (e.g. transport, treatment and storage of radioactive waste, etc.), and monitoring and laboratory activities	radiation control, shielding, establishment of buffer zones, monitoring of the concentrations of radioactive pollutants in air or on surfaces	measures to ensure workplace safety
8	Research and development	work aimed at obtaining and implementing environmental protection expertise	scientific research and development, development of measuring equipment and analysis methods, etc.	activities related to the management of natural resources
9	Other environmental protection activities	environmental management, organisation of environmental protection training, courses and information exchange and environmental protection activities not elsewhere classified	monitoring, analyses, training, remuneration of an environmental specialist, which cannot be classified under a specific area, environmental impact assessment	fire alarm, bicycle
