An example on reducing the number of employees. Working hours established based on the internal procedure rules of the employer are 8 h a day. Find the monthly average number of employees, provided that: on $1-15$ January the employer employed 30 full time employees, on 16-31 Jan 50 full time employees, on 1-31 Jan 1 part time employee with 6 working hours a day - with work load of 0.75 , on 1-15 Jan 1 part time employee with 4 working hours a day - with work load of 0.50, on 1-31 Jan 1 part time employee with 2 working hours a day - with work load of 0.25 . Finding the average number of full-time employees: $(15 \times 30+16 \times 50) / 31=40.32$

Finding the average number of part-time employees: $(0.75 \times 31+0.5 \times 15+0.25 \times 31) / 31=1.24$ Average number of employees, in fulltime equivalents: $40.32+1.24=41.56$.

| $2 /$ | Average number of employees, in full-time equivalents * | WS_091 | To find the monthly average number of employees in full-time equivalents, the total time fund in a calendar month in days is calculated for employees and divided by the number of days in the calendar month. To find the total time fund in a calendar month, all working days, holidays and days missed from work (sick days, holidays, etc.) of all employees are summed. The number of employees on days off and holidays is considered equal to the number of employees on the working day preceding the day off or holiday. Part time employees are considered proportionally with the worked time (e.g., an employee whose contractual working hours are 20 hours per week, is considered as 0.5 ). Persons on parental leave and other employees whose employment relationship has been suspended for more than 6 months are not considered in the average number of employees. | Positive real number $(0,2)$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
